

# Zero-Touch Customer Experience: An AI-Driven Multi-Agent System

Sponsored by CCIBT – Technology

## The Team & The Mission: Our Cross-Functional Team

Tejeashwar Sivasubramanian, Shubham Kumar, Sakshi Wagh, Deepali Dhir, Prafull Jenna, Jayaprakash Mahankali.

## Challenge Overview: Zero-Touch Customer Experience

Design an agentic AI system to autonomously handle natural language requests with compliance and enterprise-grade observability.

## Presentation Dates

Locations	Date
Hyderabad & Bangalore	Monday, December 15
Charlotte & New York	Tuesday, December 16

# The Mandate: From Manual Service to Autonomous Experience

## The Business Problem

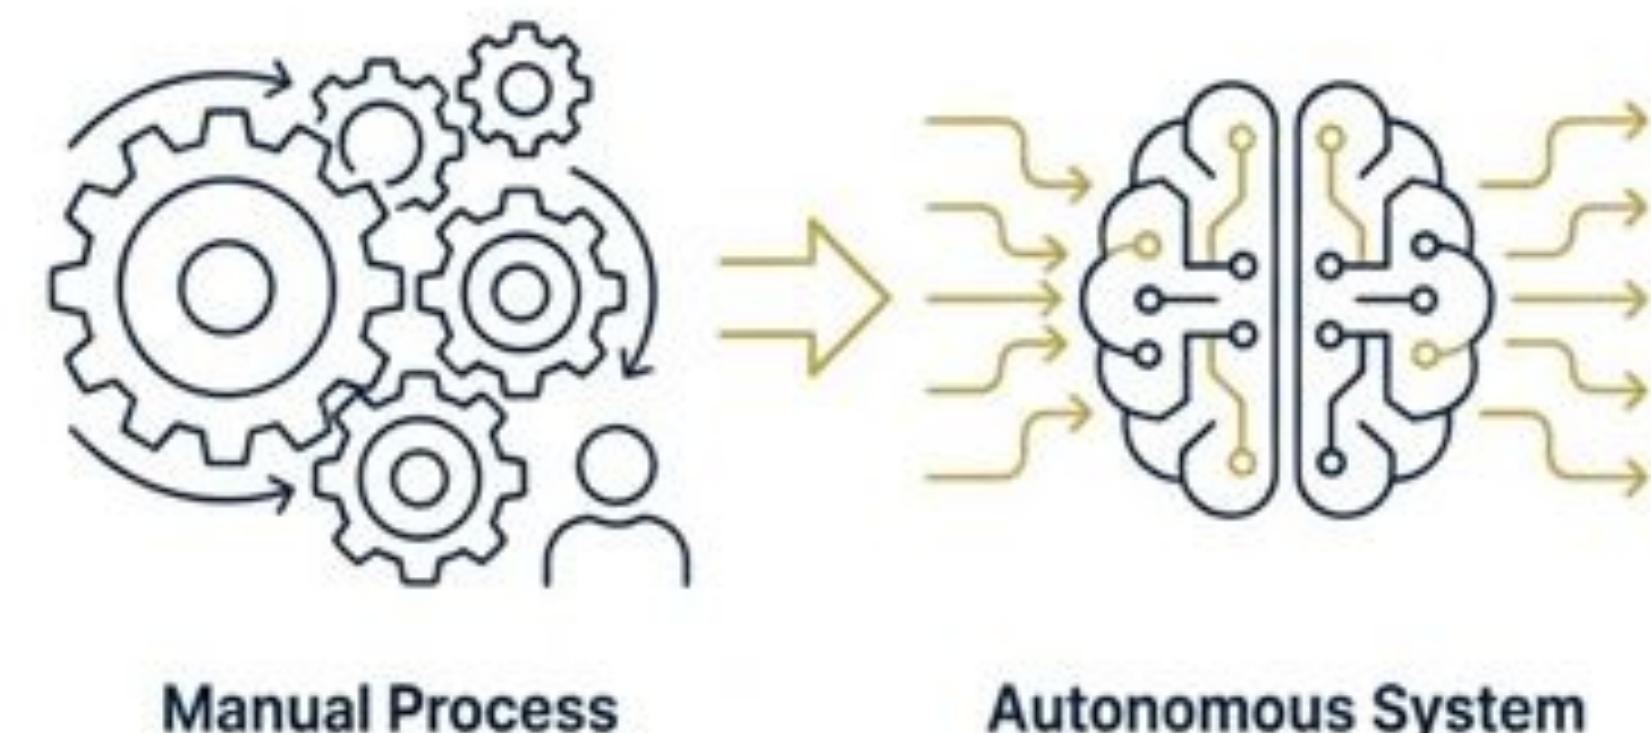

- High operational costs in manual support, slow upsell processes leading to missed revenue, and inconsistent service quality across customer interactions.

## The Challenge (Zero-Touch Customer Experience)

- Design an agentic AI system that understands natural language, provides instant, accurate reports, and executes tasks like plan upgrades autonomously.

## Our Success Criteria

- Achieve  $\geq 80\%$  accuracy in report generation, enable fully autonomous ("zero-touch") plan upgrades, and ensure robust compliance and observability.

# Target State

The screenshot shows a mobile messaging application interface. At the top, there is a header with the text "Alvolution Agent" next to a small AI icon. The main area consists of two messages. The first message is from the user, containing a query about wire reports. The second message is from the AI agent, providing detailed transaction details. A timestamp at the bottom indicates the AI's response was generated at 12:00 PM. A text input field at the bottom allows for new queries.

give me the wire detailed reports for user USR-StellarQ

11:59 AM

Here are the details for wire report T-1004 for customer USR-StellarQ:  
Report ID: T-1004: 2025-1111T12:00:00+00:00  
Status: Completed: 2025-120: Completed  
Transaction Type: Swift Wire  
Sender Name: IN223344598  
Sender Account: Arjun Mehta: IN66544374  
Bank Name Account: ● ICICI Bank  
SWIFT Code: ICICINEBB042  
Amount: 120000

12:00 PM

# The Agentic Cloud: Multi-Agent GEN AI System Architecture

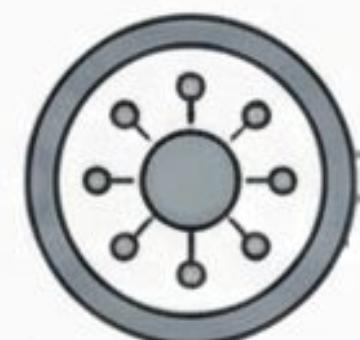

System Flow:  
From Query to  
Action

User Query

The Core  
Engine &  
Business  
Impact

## 1. Query Intake & Orchestration

### Coordinator Agent (ADK)

Receives and directs  
the workflow.

## 2. Collaborative Task Execution

## 3. Actionable Outcomes

Delivers proactive outreach, automated resolutions, and unified dashboard updates.

## The "Brain Stem": Shared Data & Memory

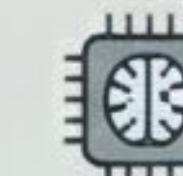

BigQuery

Vertex AI  
Vector Search

Provide long term memory and context for all agents.

## Competitive Edge: Stateful Multi-Step Reasoning

Gemini 2.5 Flash + ADK

Enables complex problem solving far beyond single-agent RAG systems.

Increase Revenue

## Delivering Measurable Business Value

Reduce Churn

Improve Customer Satisfaction

# Enterprise-Grade Reliability & Security

## Foundational Security

### Zero-Trust Security Model

Implements a “least privilege” architecture using dedicated service accounts to prevent violations.

### Granular Access Control

Ensures agents can only perform authorized actions with roles like `dataViewer` or `jobUser`.

## Operational Guardrails

### Financial & Confidence Gating

Intents with less than 80% confidence automatically trigger a fallback to a human agent.

### Mandatory Compliance Checks

A specialized agent must validate all “write” actions, like plan upgrades, before execution.

## AI Accuracy & Reliability

### Hallucination Prevention

Uses strict grounding in source documents via Vertex AI Search to prevent factual invention.

### Verifiable & Restricted Output

Agents can only respond with data that is backed by the indexed knowledge base.

## System Transparency

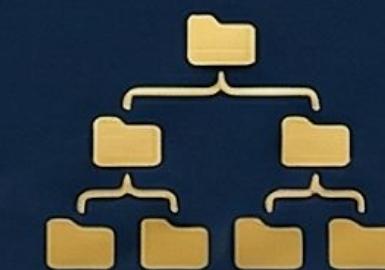

### Deep Observability

Provides end-to-end tracing with full telemetry streamed directly to BigQuery dashboards.

### Fluid State Management

Hierarchical tracking enables the system to handle interruptions and context switching effectively.

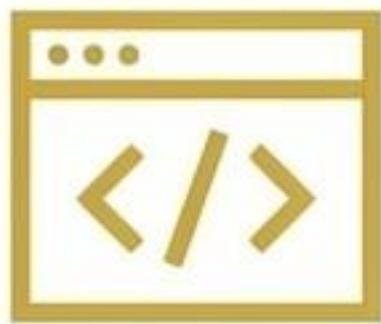

# Reference Links

## Supporting Documentation

Detailed architecture diagrams, runtime flow descriptions, and setup guides are included in the project repository.

## Code Repositories

All code, agent definitions, and deployment scripts are available for review at the following link.
